

ABSTRACT OF THE DISCLOSURE

SYSTEM FOR DOCUMENTING EVENTS

VL 5 A system for documenting events is provided. The system includes a camera for
6/25/04 acquiring images and producing a video signal, a memory for storing images based on the
video signal, and a sensor coupled to the memory. The memory includes a first volatile
memory and a second non-volatile memory. The images are stored in the volatile memory,
and the sensor activates a transfer of the images from the volatile memory to the non-volatile
memory. In a preferred embodiment, before activating the transfer of the images from the
volatile memory to the non-volatile memory, the sensor waits a preset time in order to
VL 10 acquire further images in the volatile memory. ~~Also provided is a~~ ^A method for documenting
6/25/04 events.
